

Listing of Claims:

- sub
B1
1. (currently amended) A method for handling browser requests for more than one data service with a personal proxy program, said method comprising:
- accessing a browser's original Internet connection settings;
- storing said browser's original Internet connection settings;
- updating the Internet connection settings of said browser to access said personal proxy program;
- interfacing said personal proxy program with at least two different types of handlers including a broadcast media handler and an Internet handler;
- accepting in said personal proxy program a request from said Internet browser;
- A2
- selecting [[a]] one of the handlers to handle said request; [[and]]
- directing said request to said handler; and
- receiving multimedia content from said handler for display in said browser.
2. (currently amended) The method of claim 1 wherein directing said request to said handler comprises directing said request to the Internet using said stored Internet connection settings if said [[the]] Internet should handle said request.
3. (currently amended) The method of claim 1 wherein directing said request to said handler comprises directing said request to [[,]] a second program running on a computer system that is running said personal proxy program.

A

4. (original) The method of claim 3 wherein said second program comprises a local cache server if said local cache server should handle said request.

5. (currently amended) The method of claim 1 wherein directing said request to said handler comprises directing said request to an ~~external data appliance device~~ a broadcast media receiver.

6. (currently amended) The method of claim 1 wherein ~~directing said external data appliance device receives data from a data broadcast network~~ said multimedia content is one of a terrestrial radio broadcast, a satellite television broadcast, and a cable television broadcast.

7. (currently amended) An ~~computer system arrangement~~ apparatus for browsing data from more than one data service, said ~~computer system arrangement~~ comprising:

a browser program for browsing accessible data resources using data resource requests;

a first request handler for handling data resource requests;

a second request handler for handling data resource broadcast media requests;

a personal proxy program, said personal proxy program accepting a request from said Internet browser, selecting one of said request handlers to handle said request, and directing said request to a selected request handler.

8. (original) The apparatus of claim 7 wherein said first request handler comprises the Internet.

9. (original) The apparatus of claim 7 wherein said first request handler comprises directing said request to a second program running on a computer system that is running said personal proxy program.

A2
B1
10. (original) The apparatus of claim 7 wherein said first request handler comprises a local cache server.

11. (currently amended) The apparatus of claim 7 wherein said first second request handler comprises an external data appliance device broadcast media receiver.

12. (currently amended) The apparatus of claim 11 wherein said external data appliance device receives data from a data broadcast network said broadcast media receiver is to receive one of a terrestrial radio broadcast, a satellite television broadcast, and a cable television broadcast.

A

13. (currently amended) A method for handling browser requests from a browser program for more than one data service with a personal proxy program, said method comprising:

accessing an original browser autoconfig file used by said browser program;

creating a modified autoconfig file from said original browser autoconfig file;

instructing said browser program to access said modified autoconfig file;

interfacing said personal proxy program with at least two different handlers including a broadcast media handler and an Internet handler;

accepting in said personal proxy program a request from said browser program;

selecting a handler to handle said request; and,

directing said request to said handler.

14. (original) The method of claim 13 wherein directing said modified autoconfig file directs requests to said personal proxy program.
